THREE LARGE PRINTINGS IN FOUR MONTHS

Crile and Lower's Anoci-Association

Anoci-association is the new method of anesthetizing. It prevents shock, it robs surgery of its harshness, it diminishes postoperative mortality, it lessens the possibility of nausea, vomiting, gas-pains, backache, nephritis, pneumonia, and other postoperative complications. By it the *nerve impulses are blocked*, thus protecting the cells of the brain, suprarenals and liver, traumatic or psychic exhaustion of which constitutes "shock." You get first a monograph on shock. Then follow chapters on the *principles* of anoci-association; the *technic of its application* in abdominal and gynecologic operations; in genito-urinary work; in operations for cancer of the breast, rectum, stomach, uterus, larynx, and tongue; in exophthalmic goiter operations; in operations on the brain and the extremities; *anoci-association* and *blood-pressure*, and the *technic of nitrous-oxygen anesthesia*.

Dr. A. B. Cooke, Los Angeles, California

"The method of anoci-association, as worked out by Crile, offers the best means to accomplish this end [a surgical operation with the least vasomotor disturbance]. What a man's judgment approves and *his experience confirms*, that he knows. Anoci-association constitutes the most important contribution to the progress of surgery in the past quarter of a century."

Octavo of 275 pages, illustrated. By GEORGE W. CRILE, M.D., Professor of Surgery, and WILLIAM E. LOWER, M.D., Associate Professor of Genito-Urinary Surgery, Western Reserve University. Cloth, \$3.00 net.

Dr. Crile's new work gives you fundamentals of his *kinetic theory of shock*, and shows you the pathologic identity of surgical and emotional shock. All the facts here established are founded on personal experimentation, later verified by clinical observations. You get the cell-changes produced in the brain, suprarenals, and liver by the various emotions, and the great importance of sleep in restoring these organs to their normal state after emotional exhaustion. The book is an instructive companion to "Anoci-association."

By GEORGE W. CRILE, M.D., Octavo of 240 pages, illustrated.
